

CONVOLUTION OPERATORS AND ALMOST PERIODIC FACTORIZATION

1. Convolution operators and their symbols

- 1.1 Banach and C*-Algebras
- 1.2 Convolution operators on the line
- 1.3 Almost periodic symbols
- 1.4 Kronecker's Theorem
- 1.5 Wiener-Hopf operators
- 1.6 Convolution operators on finite intervals

2. Scalar Wiener-Hopf operators

- 2.1 Fredholm and semi-Fredholm operators
- 2.2 Hankel operators
- 2.3 Continuous Symbols
- 2.4 Mean value and Bohr-Fourier Spectrum
- 2.5 Bohr's theorem and mean motion
- 2.6 AP symbols

3. Factorization of matrix functions

- 3.1 Hardy spaces
- 3.2 Wiener-Hopf factorization
- 3.3 Almost periodic factorization
- 3.4 Unitary middle factors

4. Matrix Wiener-Hopf operators with APW symbols

- 4.1 Application of the Bochner-Philips theorem
- 4.2 Invertibility of operators with APW symbols
- 4.3 One-sided invertibility of operators with APW symbols

5. Corona Theorems

- 5.1 The corona problem for AP and APW
- 5.2 The Arens-Singer Theorem
- 5.3 Empty and Nonempty coronas

6. The Portuguese Transformation

- 6.1 The idea of the Portuguese transformation
- 6.2 A special corona problem: scalar case
- 6.3 A special corona problem: matrix case

7. Some concrete factorizations

- 7.1 The one sided case
- 7.2 The big gap case
- 7.3 Scalar binomials
- 7.4 Commensurable distances
